

To Whom It May Concern,

Please let me take the opportunity to recommend the services of WindSolarUSA and Nadler Electric for any projects requiring renewable energy installation or repair. The college recently completed a 120 kW solar PV installation and WindSolarUSA along with Nadler Electric did an excellent job in the design, installation and commissioning of the array. The project had several critical design requirements plus a rigorous schedule to maintain and the team of Michelle and Jeff met every requirement on or ahead of schedule.

Lake Land College has conducted business with WindSolarUSA and Nadler Electric for many years over a variety of projects and in every case their professionalism and quality of workmanship has been outstanding. They approach projects with a can do attitude and have exhibited great patience dealing with faculty and staff at the college. It is without hesitation I can therefore recommend WindSolarUSA and Nadler Electric for any projects requiring renewable energy installations.

Sincerely,

Jeff Oder
Director of Sustainability
